

# Project ECHO in the Cancer "Space": Key Informant Interviews

Jessica L. Jones, MA, ABD

Research Scientist III, Project ECHO

University of New Mexico Health Sciences Center

January 24, 2019

## Program: Project ECHO Cancer Initiative

- Five-year, \$10 million grant from Bristol Meyers Squibb Foundation
  - Improving health equity and patient outcomes across cancer continuum.
  - Encourage replication of the ECHO model for cancer.

### Activities:

- Training for ECHO replication NM and South Africa
- Cancer Collaborative
- Technical Assistance ongoing, including evaluation
- Relationship-building with key cancer organizations

## Evaluation Plan: Questions

- How effective is the ECHO model at improving access to the continuum of cancer care? ...at generating a paradigm shift toward best-practice cancer care?
- Is the ECHO model having an impact on **rural and underserved communities** in this space?
- What are the barriers and facilitators of ECHO replication in the cancer space?
- Sub themes:
  - Leveraging community resources, building community networks
  - Culturally competent care
  - Program sustainability
  - Collaboration participatory/empowerment evaluation

## Evaluation Plan: Logic Model

#### Reducing Disparities in Cancer Care: Project ECHO

Goals: (1) increase access to best practice cancer care for vulnerable populations in the United States and around the world; (2) expand the ECHO footprint in cancer both domestically and internationally to overcome some of the health disparities in cancer care; and (3) for the ECHO model to become part of the fabric of cancer prevention, screening, treatment, palliation and survivorship in the U.S..

#### **INPUTS**

- Proven ECHO model™
- Multi-disciplinary team with many years experience implementing the ECHO model
- Team with many years experience training others in the ECHO model and evaluating outcomes
- Cancer expertise in hub sites and ECHO Cancer Advisory Group
- Interprofessional education expertise
- Existing relationships with FQHC, rural, and minority-serving clinics through local partners
- CHW and behavioral health expertise

#### **OUTPUTS**

#### Activities

- Support replication of th ECHO model for cancer
- Implement meta-ECHO learning community and cancer track at metaECHC conference.
- Partner with organizations t implement CHW focused ECHO programs for cancer
- Develop a robust evaluati
- Design and implement a sustainability plan

#### Trainees

- Oncologists, pharmacists, community health workers, nurses, and primary care clinicians
- Patients and patien advocates
- Faculty at partnering institutions who train healt professionals
- Policy makers and healthcare finance leaders

#### **OUTCOMES**

#### Short-Term

- 25 cancer hubs will be fully operation
- A CHW specific best practices guide for implementing the ECHO model in cancer developed
- MetaECHO community for ECHO cancer established and meeting regularly
- Cancer track established for the metaECHO conference
- Sustainability summary developed
- Annual reports submitte

#### Mid-Term

- Changes in provider knowledge and selfconfidence for cancer care
- Increased number of physicians trained in cancer screening, treatment, palliative care and survivorship
- Functional metaECHO community
- Increased linkage/referral to car

#### Long-Term

- Primary care workforce more knowledgeable in cancer screening, treatment, palliative care and survivorsh
- Improve quality and expand access to care
- Increase number of learning opportunities for providers in underserved areas

#### IMPACT

- Increased knowledge and competence of ECHO participants
- Increased implementation of evidence based practices for cancer care
- Increase in the early diagnosis of cancer through screening
- Increased access to cancer care
- Increased size and strengthened skills of the clinical workforce treating cancer patients
- Sustainable mechanism to support ECHO cancer programs long-term

## Evaluation: 5 buckets

- Track movement data (internal ECHO data systems)
- Hub and spoke surveys to assess impact
- Patient stories/vignettes
- Track changes in screening rates via UDS metrics (HRSA public)
- Key informant interviews

# ECHO in the Cancer Space: 3 Groups targeted for key informant interviews

Leaders: Key cancer-focused organizations (Cancer Advisory Board) and policy-makers

## Key informant interviews process

- Three years, 2019-2021
- Semi-structured interviews with "key" individuals with unique perspectives to help us understand cancer space.
- Contracted with Community Engagement Research Core (CERC) within UNMHSC to conduct interviews and help w/ analysis

## Pain points:

- Getting community buy-in for evaluation process
- Feedback/testing of interview guides.
- We identify hubs and leaders need hub help to identify spokes
- Collaboration how much is enough given limited resources?
